

Special Vessels

Thanks to our decades of experience, expertise and modern machinery, we can develop and build customised special solutions together with our customers.

Our in-house designers plan, calculate and draw your customised solution using CAD/CAM programmes before it is produced using state-of-the-art machinery.

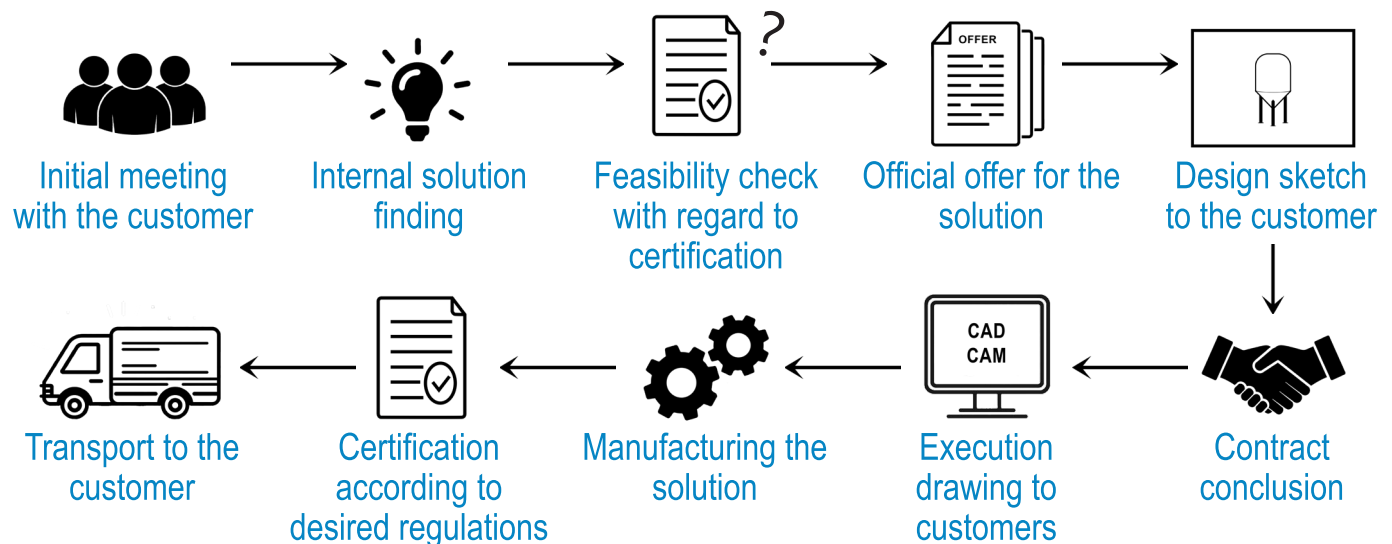

Our Manufacture Range

Special Vessels	
Wall thickness	10 - 230mm
Diameter	up to 3.500mm
Materials	carbon steels, clad steels, stainless and duplex steels

We produced special containers:

- hyperbaric chambers
- storage and hybrid systems
- protective chambers for gas regulators
- vessels with console installation
- separators
- descaling tanks and more!

Our Process

With our reliable quality management system and numerous national and international certifications, we can carry out approvals according to various standards at the customer's request.
