

Pipe Forming Technology

At eferest, we produce pipes for a wide range of applications. Our tubes are used in machine and tank construction, offshore and in various construction areas.

With our modern machinery, we can produce cold and hot-rolled pipes and thick-walled pipes.

Our Manufacture Range

Pipe Form Parts	
Wall thickness	10 - 230mm
Diameter	250 - 3.500mm
Welded	yes
Materials	carbon steels stainless steels clad steels duplex steels

- thick-walled pipes (longitudinally welded)
- vessel shells
- socket pipes
- bandages (roller shell)
- hydraulic cylinder
- flange rings
- pipe drums
- conical supports
- and more!

Certifications

To ensure high quality and safety, all materials, production processes and end products are checked using the **eferest** quality management system.

We have numerous national and international certifications and can carry out partial construction tests for welded pipes in accordance with various standards.

You can download all our certifications from our website. Scan the QR code to view all certificates!
